## 99% of the AE valves range is produced in Federal-Mogul's OE plant

Federal-Mogul's facility in Pinetown, South Africa produces inlet and exhaust valves for original equipment (OE) and the aftermarket. The Pinetown facility was awarded its first OE valve contract in 1985 and from this rapidly built a long list of OE customers. The facility has a capacity to produce 6 million valves per year at the 5200sq m facility.

One of the F-M Pinetown plant's biggest assets is its team of highly skilled individuals. The employees have specific high precision metal machining skills, enabling them to facilitate a production process capable to a few microns exceeding ISO requirements. The management team at AE valves has vast experience in valve manufacture, with some members having 30 years manufacturing experience and expertise.

In order to guarantee the highest quality for AE brand values, use is made of quality control inspection processes throughout the plant.

Through continuous range development and with more than 3000 part references, the AE valve range offers the most comprehensive coverage in the global aftermarket including latest engines. The AE Valvetrain range also includes valve guides and valve seat inserts for LV and CV engine applications.

Where appropriate the AE valve range includes nitride and chromium plated stems, cobalt protected seat areas, nickel-based super alloys that can be used in engine with temperatures of up to 820 degree Celsius. Every AE valve is designed and manufactured to the precise operating requirements of the corresponding engine.

# 🇬🇧 AE TOP ENGINE COMPONENTS

At the heart of all strategies to reduce CO<sub>2</sub> emissions is the essential requirement to precisely meter the flow of air and fuel into the combustion chamber together with the flow of combustion products out of the chamber. Much of this process is controlled by a group of technologies loosely known as 'top engine components' – those associated with the cylinder head.

Turbocharging and new combustion strategies for CO<sub>2</sub> reduction are driving up temperatures and pressures in the combustion chamber while rising biofuel contents contribute to an even more aggressive environment. Advanced materials technology is critical to ensuring long-term durability at an appropriate cost, enabling engine designers to continue to innovate so that fuel consumption and emissions can be further improved.

Valves are subjected to some of the highest stresses in the engine and among the highest temperatures, yet not only must they survive, they must also continue to seal perfectly.

**Federal-Mogul's AE range of valves is the most comprehensive in the global aftermarket, covering more than 35,000 applications.** Every part number is carefully matched to the application, with the material chosen to complement the valve seat and the guide so that they operate as a highly-optimised system.

The materials choice is so critical that some AE valves – known as 'bi-metallic valves' – are made from two materials, with the head optimised for high strength and temperature resistance while the stem is optimised for high wear resistance. A lower cost solution for less demanding applications is to heat treat the tip, helping it to resist impact stresses and rotation. Materials with

different properties may also be added on top of the bulk materials. A protective layer of ultra-hard Stellite 12 (Chromium, Nickel, Tungsten and Cobalt) may be welded to the most vulnerable areas (including the seat insert) while chromium plating may be applied to the valve stem to protect it from corrosion and to improve its sliding properties within the guide.

The interface with the valve guide is critical because the valve must be free to move up and down with minimal friction, yet the gap must resist the very high pressures in the combustion chamber to prevent leakage. The valve guide also transmits around 25 percent of the total heat adopted by the exhaust valve, transferring it safely to the coolant.

The current AE range is one of the largest and most comprehensive available, comprising more than 1,200 valves, 280 camshafts and related parts, 400 valve guides, 60 valve seats, valve springs and valve cotters covering 4,400 different engines and over 18,400 applications. The range is complemented by a portfolio of timing belts that covers more than 14,000 applications because whenever valves need replacing, the camshaft and belts should always be checked as well. Every component is not just manufactured to OE-quality standards, it is specified with a deep understanding of the materials and their interfaces so that long-term performance and durability are guaranteed.

# AE MOTORENKOMPONENTEN FÜR DEN ZYLINDERKOPF

 EMISSIONSREDUZIERUNG SETZT BEI DER VERBRENNUNG AN

Im Mittelpunkt sämtlicher Bemühungen zur Reduzierung des CO<sub>2</sub>-Ausstoßes stehen die präzise Einmessung von Luft und Kraftstoff in den Brennraum sowie der Ableitung der Verbrennungsprodukte aus dem Brennraum. Ein Großteil dieses Prozesses wird von Bauteilen und Technologien im „Zylinderkopf“ gesteuert.

Turboaufladung und neue Ansätze bei der Verbrennung zur CO<sub>2</sub>-Reduzierung treiben Temperaturen und Drücke im Brennraum in die Höhe, während ebenso der höhere Biokraftstoffgehalt eine „feindlichere“ Umgebung schafft. Nur fortschrittliche Werkstofftechnik kann den Schlüssel zu langfristiger Haltbarkeit zu angemessenen Kosten liefern. Gleichzeitig bereitet sie den Weg für künftige Innovationen mit dem Ziel, sowohl den Energieeinsatz als auch die Schadstoffproduktion zu senken.

Ventile werden auch hohen Belastungen und Temperaturen im Motor ausgesetzt und müssen diesen Bedingungen nicht nur standhalten, sondern auch ihre Funktion perfekt erfüllen.

**Federal-Mogul deckt mit AE-Ventilen mehr als 35.000 Anwendungen des Ersatzteilmarkts ab.** Jede Teilenummer ist exakt auf den Einsatzfall abgestimmt und das jeweilige Material komplementär zu Ventilsitz und Ventilführung gewählt, so dass sich ein optimal abgestimmtes System ergibt.

Da dem richtigen Werkstoff äußerst kritische Bedeutung zukommt, sind einige AE-Ventile – so genannte „Bimetall-Ventile“ – aus zweierlei Materialien gefertigt, wobei der Teller auf hohe Festigkeit und Temperaturbeständigkeit, der Schaft auf hohen Verschleißwiderstand optimiert ist. Eine kostengünstigere Lösung für weniger belastete Anwendungen stellt die Wärmebehandlung der Ventil-

spitze dar. So wird eine höher Widerstandsfähigkeit gegenüber mechanischen Belastungen (Verspannung und Drehung) erreicht. Neben den Grundwerkstoffen können Werkstoffe mit verschiedensten Eigenschaften zum Einsatz gelangen. So kann beispielsweise auf die anfälligsten Bereiche (u. a. den Ventilsitzringen) eine Schutzschicht aus ultrahartem Stellite 12 (Chrom, Nickel, Wolfram und Kobalt) aufgeschweißt werden, während der Ventilschaft zum Schutz vor Korrosion und zum besseren Gleiten in der Führung mit einer Chromschicht überzogen werden kann.

Die Grenzfläche zur Ventilführung ist kritisch, da das Ventil mit minimaler Reibung frei auf und ab beweglich sein muss und der Spalt trotzdem die im Brennraum wirkenden sehr hohen Drücke abfangen muss. Die Ventilführung überträgt außerdem rund 25 Prozent der von einem Auslassventil insgesamt aufgenommenen Hitze an das Kühlmittel.

Das aktuelle AE-Programm gehört mit mehr als 1.200 Ventilen, 280 Nockenwellen und Nockenwellenteilen, 400 Ventilführungen, 60 Ventilsitzen, Ventilschrauben und Ventilkegelstücken für 4.400 verschiedene Motoren und über 18.400 Anwendungen zu den größten und umfassendsten Sortimenten. Die Palette wird ergänzt durch Zahnriemen für mehr als 14.000 Anwendungen, denn beim Austausch der Ventile sollte immer auch der Zustand von Nockenwelle und Zahnriemen geprüft werden. Leistung und Haltbarkeit jedes Bauteil gewährleistet nicht nur die Fertigung nach OE-Qualitätsstandards, sondern auch die Berücksichtigung der spezifischen Werkstoffeigenschaften des Teils selbst und der angrenzenden Flächen.

# COMPONENTI AE PER LA PARTE ALTA DEL MOTORE

**CONTROLLARE LA COMBUSTIONE  
PER CONTROLLARE LE EMISSIONI**

Tutte le strategie messe in atto per ridurre le emissioni di CO<sub>2</sub> si basano sull'esigenza di misurare con precisione il flusso di aria e carburante in entrata nella camera di combustione, oltre che il flusso dei prodotti di combustione in uscita dalla camera di combustione. Gran parte di questo processo è controllato da un gruppo di tecnologie note con il termine generico di "componenti della componenti parte alta del motore" – ovvero quelli collegati alla testa del cilindro.

La turboalimentazione e le nuove strategie di combustione per la riduzione di CO<sub>2</sub> provocano l'innalzamento delle temperature e delle pressioni nella camera di combustione mentre l'aumento del contenuto di biocarburanti contribuisce alla formazione di un ambiente ancora più aggressivo. Un'avanzata tecnologia dei materiali si rivela critica per garantire una resistenza di lunga durata ad un costo adeguato, il che permette ai progettisti dei motori di continuare sulla strada delle innovazioni volte a migliorare ulteriormente i consumi di carburante e le emissioni.

Le valvole sono soggette ad alcune delle maggiori sollecitazioni e temperature che si formano nel motore. Nonostante ciò, non devono limitarsi a sopravvivere, ma devono anche continuare a garantire una tenuta perfetta.

**La gamma di valvole AE Federal-Mogul è la più ampia a livello mondiale nel mercato dei ricambi, e copre oltre 35.000 applicazioni.** Ciascun particolare è attentamente studiato per la sua applicazione e il materiale è selezionato come complemento della sede e del guida-valvola, cosicché questi elementi funzionano come sistema altamente ottimizzato.

La scelta dei materiali è talmente delicata che alcune delle valvole AE – note come 'valvole bimetalliche' – sono

**AE® l'esperto nella parte alta del motore**  
L'ampia gamma AE® copre oltre 35.000 applicazioni

composte da due materiali, con la testa ottimizzata per la grande robustezza e resistenza alle alte temperature, mentre lo stelo è ottimizzato per un'eccellente resistenza all'usura. Una soluzione meno costosa per applicazioni meno problematiche consiste nell'effettuare un trattamento termico del puntale, il che ne favorisce la resistenza dinamica e alla rotazione. È anche possibile effettuare un riporto di materiali con diverse proprietà sugli elementi di base. Uno strato protettivo di Stellite 12 extra-dura (cromo, nichel, tungsteno e cobalto) può essere saldato alle aree più vulnerabili (incluso l'insero della sede) mentre allo stelo della valvola si può applicare una cromatura per proteggerlo dalla corrosione e migliorarne le proprietà di scorrimento all'interno della guida.

Il collegamento con il guida-valvola è critico in quanto la valvola deve essere libera di muoversi verso l'alto e verso il basso con un minimo attrito, ma allo stesso tempo il gioco deve resistere a pressioni molto alte nella camera di combustione per evitare il formarsi di perdite. Il guida-valvola trasmette anche circa il 25% del calore totale della valvola di scarico, trasferendolo in modo sicuro al liquido refrigerante.

L'attuale gamma AE è una delle più ampie e complete con più di 1.200 valvole, 280 alberi a camme e componenti collegati, 400 guidevalvole, 60 sedi valvole, molle e copiglie valvole per 4.400 diversi motori e oltre 18.400 applicazioni. La gamma è completata da una serie di cinghie di distribuzione che copre oltre 4.000 applicazioni perché ogni volta che è necessario sostituire le valvole è opportuno controllare anche l'albero a camme e le cinghie. Ciascuno dei componenti è costruito non solo per essere all'altezza degli standard qualitativi OE, ma è caratterizzato da una profonda conoscenza dei materiali e dei loro elementi di collegamento per garantirne prestazioni e durata nel corso del tempo.

**MAÎTRISER LA COMBUSTION  
POUR MAÎTRISER LES ÉMISSIONS**

Au cœur de toutes les stratégies de réduction des rejets de CO<sub>2</sub>, se trouve l'exigence incontournable de mesurer précisément le débit d'air et de carburant entrant dans la chambre de combustion ainsi que le flux de produits de combustion sortant de la chambre. La majeure partie de ce processus est contrôlée par un groupe de technologies communément désignées sous le terme « composants haut moteur », lesquels sont associés à la culasse.

La turbocompression et de nouvelles stratégies de combustion visant à réduire les rejets de CO<sub>2</sub> entraînent une hausse des températures et des pressions à l'intérieur de la chambre de combustion alors que la teneur grandissante en biocarburants contribue à créer un environnement encore plus agressif. Une technologie de matériaux de pointe est essentielle pour garantir une durabilité à long terme à un coût convenable afin de permettre aux concepteurs de moteurs de poursuivre sur la voie de l'innovation en vue d'une réduction encore plus grande de la consommation et des émissions.

Les soupapes sont soumises aux contraintes les plus élevées à l'intérieur du moteur et aux températures les plus hautes ; cependant, elles doivent non seulement résister mais également rester parfaitement étanches.

**La gamme de soupapes AE de Federal-Mogul est la plus complète du marché mondial de la rechange, couvrant plus de 35 000 applications.** Chaque référence correspond précisément à une application, le matériau étant choisi pour compléter le siège de soupape et le guide et former ainsi un système hautement optimisé.

Le choix des matériaux est tellement critique que certaines soupapes AE (appelées « soupapes bimétalliques ») sont fabriquées à partir de deux matériaux, avec une tête optimisée

**AE® : Le spécialiste du Haut Moteur**

AE® propose une vaste gamme couvrant plus de 35 000 applications

pour une résistance mécanique et thermique élevée, et une tige optimisée pour une grande résistance à l'usure. Une solution moins onéreuse pour les applications moins exigeantes consiste à chauffer la pointe de la soupape pour qu'elle résiste mieux aux sollicitations et à la rotation. Des matériaux aux propriétés différentes peuvent également compléter les matériaux de base. Une couche protectrice en Stellite 12 ultra dure (chrome, nickel, tungstène et cobalt) peut être soudée dans les zones les plus vulnérables (y compris le siège rapporté) alors qu'un chromage peut être appliqué sur la tige de la soupape pour la protéger de la corrosion et en améliorer les propriétés de glissement à l'intérieur du guide.

L'interface avec le guide de soupape est essentielle, car la soupape doit monter et descendre librement avec un frottement minimal, cependant l'écartement doit résister aux pressions très élevées à l'intérieur de la chambre de combustion afin d'éviter les fuites. Le guide de soupape transmet également près de 25 % de l'ensemble de la chaleur captée par la soupape d'échappement, la transmettant en toute sécurité au liquide de refroidissement.

La gamme AE actuelle est l'une des plus vastes et des plus complètes qui soient, incluant plus de 1 200 soupapes, 280 arbres à cames et pièces connexes, 400 guides de soupape, 60 sièges de soupape, ressorts de soupape et clavettes de soupape couvrant 4 400 moteurs différents et plus de 18 400 applications. La gamme est complétée par une gamme de courroies de distribution couvrant plus de 14 000 applications, car chaque fois que des soupapes doivent être remplacées, l'arbre à cames et les courroies doivent toujours être vérifiés également. Chaque composant est non seulement fabriqué conformément aux normes de qualité des équipements d'origine, mais il est spécifié grâce à une compréhension approfondie des matériaux et de leurs interfaces en vue de garantir les performances et la durabilité à long terme.

## COMPONENTES DE MOTORES AE

**CONTROL DE LA COMBUSTIÓN PARA LA REGULACIÓN DE LAS EMISIONES**

En el centro de todas las estrategias de reducción de emisiones de CO<sub>2</sub> se encuentra el requisito básico de medir con precisión el flujo de aire y de combustible que penetran en la cámara de combustión junto con el flujo de productos de combustión que salen de la cámara. Gran parte de este proceso lo controla un grupo de tecnologías denominado «parte alta de motor», que son los que están relacionados con la culata.

La turbocompresión y las nuevas estrategias de combustión para la reducción de CO<sub>2</sub> están haciendo aumentar las temperaturas y presiones en la cámara de combustión, mientras que el incremento de contenido de biocombustibles contribuye a un entorno aún más agresivo. La tecnología de materiales avanzados es fundamental para garantizar una durabilidad a largo plazo a un coste adecuado, lo que permite que los diseñadores de motores sigan innovando para que el consumo de combustible y las emisiones se puedan mejorar.

Las válvulas están sujetas a algunas de las tensiones y temperaturas más altas del motor, sin embargo, no sólo deben resistirlas, sino que deben seguir ofreciendo un sellado perfecto.

**La gama de válvulas AE de Federal-Mogul, que abarca más de 35.000 aplicaciones, es la más completa en el mercado de postventa mundial.** Cada referencia está específicamente relacionada con la aplicación correspondiente, con el material elegido para complementar el asiento y con la guía de la válvula de modo que actúen conjuntamente como un sistema muy optimizado.

La elección de materiales es tan importante que algunas válvulas AE (denominadas «válvulas bimetálicas») están hechas de dos materiales: por una parte, se ha optimizado

**AE®, especialista en motores**

La amplia gama AE® cubre más de 35.000 aplicaciones

la culata para resistir a las altas temperaturas y fuerzas, y, por otra parte, el vástago está optimizado para ofrecer una alta resistencia al desgaste. Una solución de bajo coste para aplicaciones menos exigentes es la de tratar la punta con calor, de modo que pueda resistir a los efectos de impactos y giros. También se pueden añadir materiales con diferentes propiedades en la parte superior. Se puede soldar una capa protectora de Stellite 12 (cromo, níquel, tungsteno y cobalto) superduro en las zonas más vulnerables (incluida la inserción del asiento), mientras que se puede aplicar cromado al vástago de la válvula para protegerlo de la corrosión y mejorar sus propiedades de deslizamiento dentro de la guía.

La interfaz con la guía de la válvula es fundamental, ya que la válvula debe quedar libre para moverse arriba y abajo con una fricción mínima; sin embargo, para evitar fugas el espacio debe resistir las altísimas presiones de la cámara de combustión. La guía de la válvula también transmite alrededor del 25 % del calor total absorbido por la válvula de escape, y lo transfiere de manera segura al refrigerante.

La gama AE actual, que comprende más de 1.200 válvulas, 280 árboles de levas y componentes relacionados, 400 guías de válvula, 60 asientos de válvula, muelles de válvula y chavetas, es una de las más amplias y completas que se encuentran en el mercado y cubre 4.400 motores diferentes y más de 18.400 aplicaciones. La gama se complementa con referencias de correas de distribución que cubren más de 14.000 aplicaciones, porque cada vez que es necesario cambiar las válvulas, el árbol de levas y las correas también se deben revisar. Todos los componentes se fabrican según las normas de calidad de equipo original y, además, se especifican con un profundo conocimiento de los materiales y sus interfaces con el fin de garantizar el rendimiento y la durabilidad a largo plazo.

## CZĘŚCI DO GORY SILNIKA AE

**KONTROLOWANIE SPALANIA, BY  
KONTROLOWAĆ EMISJĘ ZANIECZYSZCZEŃ**

Strategie redukcji emisji CO<sub>2</sub> koncentrują się na kontroli napływu powietrza i paliwa do komory spalania oraz na wyptywie produktów spalania z komory. Duża część tego procesu jest sterowana przez grupę elementów znanych potocznie jako „elementy góry silnika” - połączone z głowicą cylindrów.

Turbodoładowanie i nowe rozwiązania służące redukcji emisji CO<sub>2</sub> powodują wzrost temperatur i ciśnienia w komorze spalania, a wzrost liczby biokomponentów w paliwie powoduje dalsze utrudnienie warunków pracy. Poziom technologii materiałowej, która umożliwia produkcję odpowiednio trwałych elementów przy akceptowalnych kosztach jest niezwykle ważny. Dzięki rozwojowi technologii materiałowej konstruktorzy silników mogą kontynuować swe wysiłki w celu ograniczenia zużycia paliwa i zmniejszenia redukcji zanieczyszczeń.

Zawory są poddane jednym z największych obciążeń spośród części silnikowych. Ponadto w warunkach najwyższych temperatur muszą nie tylko przetrwać, ale muszą zapewniać idealną szczelność.

**Program Federal-Mogul zaworów AE, pokrywający ponad 35 000 zastosowań, jest najbardziej uniwersalnym programem zaworów na światowym rynku części zamiennych.** Każdy element jest precyzyjnie dostosowany do konkretnego zastosowania, włączając w to również materiał zaworu tak, by łącznie z gniazdem zaworu i prowadnicą mogły one stanowić idealnie współpracujący zespół.

Wybór materiału na zawory jest tak ważny, że niektóre zawory AE - zwane zaworami bimetalicznymi - są wykonywane z dwóch materiałów. Materiał na grzybek zaworu jest dobierany pod kątem wysokiej wytrzymałości i odporności na wysoką temperaturę, podczas gdy materiał

**AE® specjalista w zakresie części do „góry” silnika**  
Szeroki program części AE® obejmuje ponad 35 000 zastosowań

na trzonek jest dobierany pod względem odporności na ścieranie. Tańsze rozwiązanie do zastosowań w mniej obciążonych silnikach polega na cieplej obróbce końcówki, wzmacniającej odporność na obciążenia udarowe i obciążenia wynikające z obrotu. Warstwa ochronna bardzo twardego materiału Stellite 12 (chrom, nikiel, tungsten i kobalt) może być przyspawana w najbardziej zagrożonych obszarach (włączając w to gniazda zaworowe), podczas gdy pokrycia chromowe mogą zostać zastosowane w celu ułatwienia ruchu trzonka zaworu w prowadnicy oraz jego ochrony przed korozją

Pasowanie trzonka zaworu w prowadnicy jest bardzo ważne, gdyż zawór musi mieć możliwość ruchu w górę i w dół z minimalnym tarcieniem, natomiast konieczny luz w prowadnicy nie może powodować nieszczelności i ucieczki gazów z komory spalania pod wysokim ciśnieniem. Ponadto prowadnica zaworu musi mieć zdolność bezpiecznego odprowadzenia do elementów chłodzonych około 25% ciepła, które przepływa przez zwór wydechowy.

Obecny program AE jest jednym z najbardziej uniwersalnych programów, obejmując ponad 1200 zaworów, 280 wałków rozrządu i powiązanych z nimi części, 400 prowadnic zaworowych, 60 gniazd, sprężyn i zapinek zaworowych pokrywających potrzeby 4 400 różnych silników i ponad 18 400 zastosowań. Program jest uzupełniony przez ofertę pasków rozrządu, która pokrywa 14 000 zastosowań, gdyż przy każdej wymianie zaworów także wałek rozrządu i paski powinny być sprawdzone. Każdy element nie tylko jest wytwarzany zgodnie z jakościowymi standardami OE, ale jest wykonany z pełnym zrozumieniem inżynierii materiałowej i zasad współdziałania z innymi komponentami, dlatego jego trwałość i efektywność działania może być gwarantowana.

# КОМПОНЕНТЫ АЕ ДЛЯ ВЕРХНЕЙ ЧАСТИ ДВИГАТЕЛЯ

**КОНТРОЛЬ СЖИГАНИЯ ТОПЛИВА ДЛЯ  
КОНТРОЛЯ ВЫБРОСОВ**

Ключевой элемент для всех способов снижения выбросов CO<sub>2</sub> - точное измерение объемов воздуха и топлива, подаваемых в камеру сгорания, а также продуктов сгорания, выходящих из камеры. Большая часть процесса контролируется устройствами, называемыми «компоненты верхней части двигателя», - они примыкают к головке блока цилиндров.

Турбонаддув и новые способы сжигания топлива с уменьшением выделения CO<sub>2</sub> связаны с повышением температуры и давления в камере сгорания, а биологические компоненты топлива создают еще более агрессивную среду. Новейшие материалы и технологии крайне важны для обеспечения долговечности деталей по приемлемой цене. Так конструкторы двигателей могут внедрять дальнейшие инновации для сокращения расхода топлива и вредных выбросов.

Клапаны подвергаются самому сильному воздействию при работе двигателя. При высоких температурах и других неблагоприятных условиях они должны не просто работать, а обеспечивать надежное уплотнение.

**Линейка клапанов AE Federal-Mogul является самой широкой на мировом вторичном рынке и предназначена для применения в более чем 35 000 различных системах.**

Каждая деталь точно соответствует назначению, а материал подбирается так, чтобы седло клапана и направляющая функционировали как единая слаженная система.

Выбор материалов настолько важен, что некоторые клапаны AE (так называемые «биметаллические») изготавливаются из двух различных материалов: очень прочного и термостойкого для головки клапана и чрезвычайно износостойкого для стержня клапана. Менее дорогостоящее решение для менее агрессивных сред - термообработка конца стержня клапана для стойкости к ударным нагрузкам и вращению. Кроме обычных могут

AE® - специалист по деталям верхней части двигателя  
В ассортимент AE® входят более 35 000 наименований

использоваться материалы с различными свойствами. Защитный слой из ультратвердого сплава Stellite 12 (хром, никель, вольфрам и кобальт) можно нанести на наиболее уязвимые области (включая вставное седло клапана), а хромированное покрытие - на стержень клапана, чтобы защитить его от коррозии и улучшить его скольжение в направляющей втулке.

Сопряжение с направляющей клапана крайне важно, так как клапан должен свободно подниматься и опускаться с минимальным трением, но в то же время образующийся зазор между стержнем клапана и его направляющей должен эффективно противостоять очень высокому давлению в камере сгорания, чтобы не происходило утечек. Направляющая клапана также передает к системе охлаждения около 25% общего тепла, отведенного выпускным клапаном от камеры сгорания.

На сегодня ассортимент AE является одним из самых широких и включает более 1200 клапанов, 280 распределительных валов и сопряженных деталей, 400 направляющих клапана, 60 гнезд клапана, пружины клапана и сухари клапана для более чем 4400 различных двигателей и более 18 400 систем. Ассортимент дополняется ремнями привода газораспределительного механизма для более чем 14 000 систем, так как если необходимо заменить клапан, всегда требуется проверять состояние распределительного вала и приводные ремни. Каждая деталь не только изготовлена в соответствии со стандартами оригинального качества, но и разработана с глубоким пониманием функционирования и взаимодействия различных материалов. Поэтому долговечность и долговременная эффективность гарантируются.

# مكونات أعلى محرك AE

## التحكم بعملية الاحتراق للسيطرة على الانبعاثات

إن جوهر كافة الإستراتيجيات الهادفة لتقليل انبعاثات غاز ثاني أكسيد الكربون يكمن في قياس تدفق الهواء والوقود بدقة داخل غرفة الاحتراق فضلاً عن قياس الانبعاثات الناجمة عن الاحتراق خارج الغرفة. ويتم التحكم في القدر الأكبر من هذه العملية من خلال استخدام مجموعة من التقنيات المعروفة بـ 'المكونات الأساسية للمحرك' - والتي ترتبط مباشرة برأس الأسطوانة (الواجهة العلوية للسليندر).

يؤدي كل من الشحن التوربيني والاستراتيجيات الجديدة الهادفة إلى تقليل انبعاثات ثنائي أكسيد الكربون إلى ارتفاع درجات الحرارة ومعدلات الضغط في غرفة الاحتراق فضلاً عن زيادة عناصر الوقود الحيوي التي تسهم في تلوث البيئة بشكل كبير فنحن ندرك أهمية تطوير تقنيات المواد لضمان قوة تحمل هذه الأجزاء على المدى الطويل إلى جانب تقليل التكلفة مما يوفر الفرصة لمصممي المحركات لمواصلة ابتكار الوسائل الكفيلة بتحسين معدلات استهلاك الوقود وبالتالي الحد من الانبعاثات الناجمة عنه.

وعلى الرغم من الضغوط القصوى ودرجات الحرارة الهائلة التي تتعرض لها الصمامات داخل المحرك، إلا أن وظيفة هذه الصمامات لا تقتصر على الصمود في ظل هذه الأجواء وحسب بل ينبغي أن تحافظ على منع التسريب تماماً.

تعد مجموعة الصمامات التي تحمل ماركة AE من Federal-Mogul أكبر مجموعة متنوعة من الصمامات في سوق قطع الغيار حيث إنها تضم ما يربو على 35000 تطبيق. يتم تحديد رقم كل قطعة بدقة ليلائم التطبيق الخاص بها بالإضافة إلى اختيار المادة المناسبة لقاعدة الصمام والدليل الخاص به بحيث تتمكن هذه المكونات من العمل كنظام متكامل إلى حد كبير.

إن اختيار مواد التصنيع أمر ضروري للغاية لأن بعض صمامات AE - المعروفة باسم 'الصمامات ثنائية المعادن' - مصنوعة من مادتين بحيث يُصنع الجزء العلوي من المادة الأقوى لتكون مقاومة لدرجات الحرارة والضغط الهائلين

AE قمة الخبرة في مجال المحركات  
تشمل مجموعة AE المتنوعة أكثر من 30000 تطبيق

بينما يتم تصميم الجزء الأسفل لمقاومة للتآكل، يتمثل أحد الحلول منخفضة التكاليف للتطبيقات الأقل طلباً في معالجة أطراف الصمامات حراريًا لمقاومة تأثيرات الضغط والتدوير، ويمكن إضافة المواد ذات السمات المختلفة إلى قمة المواد غير المعبأة. ويمكن لحام أكثر الأماكن المعرضة للتآكل بالطبقة الواقية المصنوعة من الستليت ١٢ فائق الصلابة (والمكونة من الكروم والنيكل والتنجستن والكوبالت) (بما في ذلك إدخال قاعدة الصمام) بينما يمكن طلاء الجزء السفلي من الصمام بمادة الكروم لحمايته من التآكل وتحسين خصائصه الانزلاقية في دليل الصمام.

يعد السطح البييني المتعلق بدليل الصمام هاماً للغاية لأن الصمام يجب ألا يكون مقيداً عند تحريكه لأعلى وأسفل وأن يتمتع بأقل درجة احتكاك ممكنة، ويجب أن تكون الفجوة قادرة على تحمل درجات الحرارة المرتفعة للغاية في غرفة الاحتراق لمنع التسريب، ويقوم دليل الصمام أيضاً بنقل حوالي ٢٥٪ من إجمالي الحرارة المنبعثة من صمام العادم، ومن ثم يقوم بتحويلها بأمان إلى سائل التبريد.

تعد مجموعة AE حالياً إحدى أكبر مجموعات قطع الغيار وأشملها حيث تضم أكثر من 1200 نوعاً من الصمامات و280 صنفاً من عمود الكامات والأجزاء ذات الصلة و400 نوعاً من أدلة الصمامات و60 صنفاً من قواعد الصمامات ونايضات صمامات وسدادات صمامات صالحة للاستخدام مع 4400 نوعاً مختلفاً من المحركات، وما يزيد عن 18400 تطبيق، وتكتمل هذه السلسلة بمجموعة من السيور المسننة التي تُستخدم في ما يربو على 14000 تطبيق لأن استبدال الصمامات ينبغي أن يقتنر دائماً بفحص عمود الكامات والسيور. وعليه لا يقتصر تصنيع أي مكون وفقاً لمعايير الجودة الخاصة بالمعدات الأصلية (OE) فحسب، بل إن عملية التصنيع مشروطة بالاستيعاب التام لهذه المواد والأسطح البيينية لها مما يضمن امتداد العمر الافتراضي لها على المدى الطويل.

Claims for damages, of any form whatsoever, resulting from details made in this catalogue or from incorrect use, application, storage or handling, are explicitly excluded. All former statements lose their validity with the publication of this catalogue.

The catalogue is not an operating manual for the use and installation of the valves and components. It does not contain any advice in a legal sense. Also, it is not possible to forego the expertise of those carrying out the installation and application. The individual references made in this catalogue for the installation and the application of the valves and components are instructions solely for the technically qualified specialist and are to be checked and verified by them for their suitability in each case. Federal-Mogul accepts no responsibility for application decisions.

The contents of the catalogue are not intended to create or substitute any contractual agreement which has to be reserved exclusively to a separate agreement between 2 identified parties, whereby seller can be only one of our Federal-Mogul entities as mentioned on the back cover page.

The right is retained to correct errors and alterations, particularly with regard to amendments in the engine manufacturers details and stipulations.

# VALVES TROUBLE TRACER CHART

## RADIAL CRACKING OF VALVE HEAD, LEADING TO A TRIANGULAR SEGMENT BREAKING OFF

**Symptom:** Sudden mechanical noise. Rough running. Possible seizure.  
**Cause:** Poor temperature distribution across the valve head resulting in high tensile stresses in the rim, often combined with severe

deflection of the head due to abnormal combustion pressures and temperatures. Extreme thermal cycles, (continual sudden changing from full power to shut-down). Damage marks on the rim producing stress raisers. Mechanical overload from valve bounce.

**Remedy:** Check the remaining valves for signs of cracking, replace where necessary. Ensure the correct valves have been used. Check engine settings, valve springs, guides and followers. Do not overspeed the engine.

## “GUTTER” BURNT THROUGH VALVE RIM

**Symptom:** Loss of power. Rough running.  
**Cause:** Valve clearance too small holding the valve off its seat. Sticking stem, poor/uneven seating or misalignment of the valve assembly. Overheating from pre-ignition. Excessive build up of carbon which flakes off the valve face to form a gas leakage path. Hard carbon particles peen into the seat surface until enough indentations line up to form a gas leakage path.  
**Remedy:** Ensure valve clearance is to specification. Check stem to guide clearance and for any misalignment of the valve assembly. Check engine timing, carburettor settings and injection timing.

## EXCESSIVE VALVE STEM AND GUIDE WEAR

**Symptom:** Valve gear noise, high oil consumption, exhaust smoke on initial start up.

**Cause:** Too great or too small valve stem to guide clearance. Poor valve stem lubrication or ingress of dirt through the air intake system. It should be noted that the cause of this

problem is not always obvious. Unless the cause is readily apparent, additional advice should be sought.

**Remedy:** Ensure correct valve and guides are fitted. Check alignment, valve stem to guide clearances, valve stem seals and lubrication system.

## VALVE HEAD BREAKING OFF STEM

**Symptom:** Rough engine with sudden mechanical noise.  
**Cause:** Mechanical overload, such as seating velocity too high from excessive valve clearances (see graph of cam lift). Valve bounce, valve to piston contact caused by overspeeding, weak or broken valve springs or sticking valve stem. Uneven seating due to misalignment or distorted valve.  
**Remedy:** May not be possible due to extreme damage this failure can cause, however: Check valve springs, guides and alignment and repair where necessary. Check seat guides, pistons and bores for damage. Reset the valve clearances.

## INLET VALVE UNDERHEAD CARBON BUILD-UP

**Symptom:** Poor starting. Loss of power. Blue smoke from exhaust (when throttle closed).  
**Cause:** Excessive clearance between valve stem and guide. Valve stem seal failure or wear. Excessive oil supply due to blocked drainage paths. Incorrect grade of lubricating oil used.  
**Remedy:** Check valve stems, guides and stem seals for wear and replace where necessary. Ensure there is no blockage in the engine drainage or breathing systems.

## STEM BREAKAGE THROUGH COLLET GROOVE

**Symptom:** Excessive mechanical noise, bent stem and possible head detachment.

**Cause:** Poor assembly allowing uneven loading. Poor handling, dropping etc. Bouncing the valve after fitting by hitting the tip with a hammer. Valve bounce from excessive seating velocity.

**Remedy:** May not be possible

due to extreme damage this failure can cause, however: Check seats, guides, springs, pistons and bores for damage and repair where necessary. Do not overspeed the engine.

## BLOW HOLE THROUGH VALVE HEAD, STARTING FROM A RADIAL CRACK

**Symptom:** Rough running. Loss of compression. Poor starting.

**Cause:** Similar to a segmental breakage, but gas escapes through the crack and burns a hole. Extreme

thermal cycles (continual sudden changing from full power to shut down). Damage marks on the rim producing stress raisers. Mechanical overload from valve bounce.

**Remedy:** Check remaining valves for signs of cracking, replace where necessary. Ensure the correct valves have been used. Check engine settings, valve springs, guides and followers. Do not overspeed engine.

## SCUFFED/STICKING VALVE STEM

**Symptom:** Poor performance due to low compression. Mechanical breakage due to sticking valves.

**Cause:** Marginal lubrication from inadequate valve to stem clearance, causing scuffing or metal transfer. This may ream out the valve guide leading to the second cause, excessive oil from too great a clearance carbonising on the stem to cause sticking.

**Remedy:** Ensure the valve stem to guide clearance is to specification. Ensure the correct valve stem seals have been used. Replace worn components where necessary.

## VALVE OPERATING CONDITIONS

- Initial valve opening and final valve closing occurs very gently. Cam lobe profiles include lifting and lowering ramps to achieve this.
- Ensure the valve clearances are not too great to prevent the valve being hammered open or dropped onto its seat. (See diagram)

- The valve seat must be concentric with the valve guide. Any eccentricity that exists between the valve seat and guide will force the valve sideways.
- Excessive valve guide wear will occur as a result of this which can lead to a fatigue failure of the valve stem.

Typical exhaust valve temperature distribution in a spark ignition engine. Figures are degrees in centigrade.

- An exhaust valve may operate at up to 800 °C, and 75% of its cooling is by transferring heat to the valve seat.
- Ensure the valve seat contact is correct and as specified by the engine manufacturer.

## VALVE BREAKAGES – FRACTURE AT LOWER COTTER GROOVE

**Symptom:** Valve breakage shortly after cylinder head rebuild, during initial start-up or during test run.

**Cause:** Over extension / “pump-up” of hydraulic lifters (photo 1). Incorrect seating of the valve spring to the cylinder head (photo 2). Engine over-speed or weak valve springs.

**Remedy:** Whenever possible fit new hydraulic lifters, when new valves are fitted. Ensure the engine block has been thoroughly cleaned to remove all traces of debris. Take extreme care to seat all valve springs correctly in the recess of the cylinder head. Renew engine oil and replace oil and air filters.

The following features on all engine packaging prove that the parts inside are Original Quality.

## CHECK THE UNIQUE CODE ONLINE AT [www.fmecat.eu](http://www.fmecat.eu)

Each Federal-Mogul part has a unique code which is displayed on the labels in an alphanumeric and Data Matrix format.

A Data Matrix code is a 2-dimensional (2-D) matrix barcode.

The Unique Code can be verified in 3 different ways:

- Typing in the Unique Code
- Reading the 2-D code with a 2-D scanner
- Reading the 2-D code with a mobile phone which is supported by NeoReader™ ([www.neoreader.com](http://www.neoreader.com))

For further details please check [www.fmecat.eu](http://www.fmecat.eu)

### LOOK FOR THE HOLOSPOT®

The Holospot® label features a 4-digit alphanumeric code.

Please check it to make sure that:

- The 4-digit code appears in rainbow colours using the light of the magnifier and is different on each pack
- The Federal-Mogul logo also appears in the Holospot®. The last 4 digits of the alphanumeric code have to be the same as the ones in the Holospot®

Verify the Unique Code online at [www.fmecat.eu](http://www.fmecat.eu)

### PROTECTION

Special label design means any attempt to remove or swap the label will result in tearing

### PERMANENT SELF-ADHESIVE LABEL

Seals the box with label detail on the front

### CRASH LOCK BOX BOTTOM

Prevents any attempt to remove or exchange items as it is impossible to reseal once opened
